## Genius 5 Smart Battery Charger from NOCO

**Order No. 33 - 15332** ⚠

Noco Genius 5 smart 5A battery charger and maintainer. 110 volt, 8 tep, fully automatic switch-mode battery charger and maintainer. The Genius 5 restores batteries to their original capacity, recovers slightly sulfated batteries. Charges batteries in cold climates, rescues drained batteries and provides maintenance charging to increase battery life. A versatile battery charger that provides charging modes for both large and small batteries from 1.2 -120Ah such as lawn mowers, cars, RV's boats, and trucks as well as for motorcycles, ATV's, Jet Skis or snowmobiles. Genius 5 is similar to the G3500, just better. Its 34% smaller and delivers 65% more power. Its the all-in-one solution battery charger, battery maintainer, trickle charger plus battery desulfator. Designed for 6-volt and 12 volt lead acid automotive, marine, and deep cycle batteries including flooded, gel, AGM and maintenance free, plus lithium-ion batteries. An integrated thermal sensor detects the ambient temperature and alters the charge to eliminate over charging in hot climates and under charging in cold climates. Charges batteries as low as 1-volt. Or use the all-new force mode that allows you to take control and manually begin charging dead batteries down to zero volts. Automatically detects battery sulfation and acid stratification to restore lost battery performance for stronger engine starts and extended battery life. 110 volts, US Plug-In adapter only.

Slushplow 38" snow blower attachment. This blower accessory turns your 2 or 3 stage blower into a plow that is ideal for slush and snow less than 5 inches. Slushplow is easily installed and removed and the angle can be adjusted. A snow blower witha transmission is required. It is not compatible with single stage snow blowers or Honda 2 stage snow blowers. The blade must be larger than the intake on the blower. Comes with all mounting hardware, mounting template and rubber squeegee.

# TYPES AND USES OF CHAIN SAW CHAIN

The fundamental difference in these types of cutters are a rounded corner on the semi chisel and a square corner on the full chisel. The rounded corner provides a slightly smoother less aggressive cut while the square corner is all about getting the job done by cutting more aggressive chucks as it eats through whatever wood your cutting.

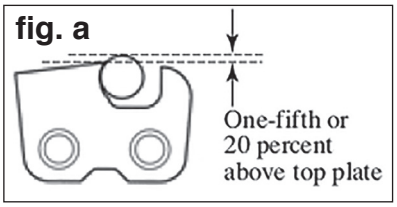
# SHARPENING CHAIN SAW CHAIN

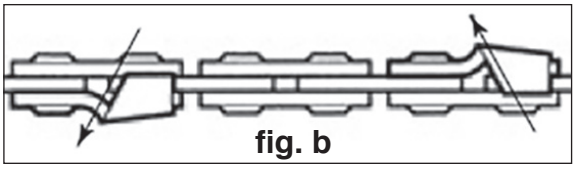
**Chain Sizes: File Sizes:**

**1/4 = 5/32 file, 3/8 LP = 5/32 file, .325 = 3/16 file, 3/8 Standard = 7/32 file**

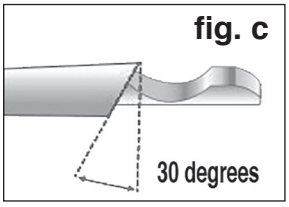
**Sharpening of Chain saw chain has a few basic instructions in order to be successful**



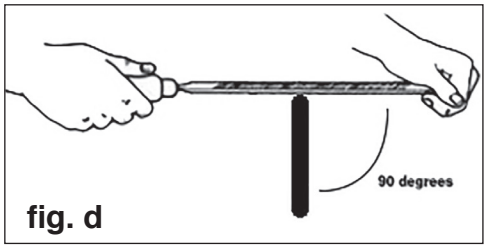
- Choose the correct size file for the chain
- Place the file inside the cutter tooth as pictured **(fig. a)**. The top of the file should arch above the cutter tooth when positioned correctly.

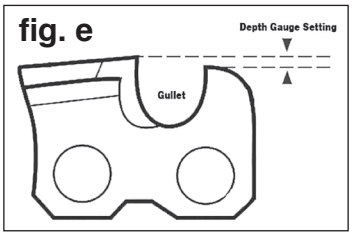


- Only file in one direction starting from the inside of the cutter tooth pushing the file outward in one motion. **(fig. b)**
- File at the correct angle, this angle will usually be about 30 degrees. The top plate of the cutter tooth as shown in **(fig. c)** will give you the correct angle.



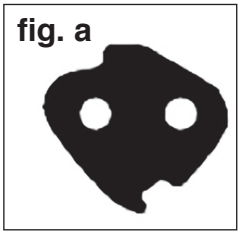
- Be sure to file the chain from a 90 degree angle from the bar. Do not file the cutter downward or upward only straight through in the same direction of the cutter tooth. **(fig. d)**
- Use a flat file to file any imprefections off the cutter tooth depth gauge. Shown in the picture on the left **(fig. e)** the depth gauge is at the front of the cutter controlling the depth of the cutter tooth.

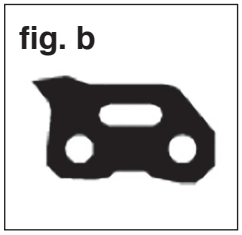


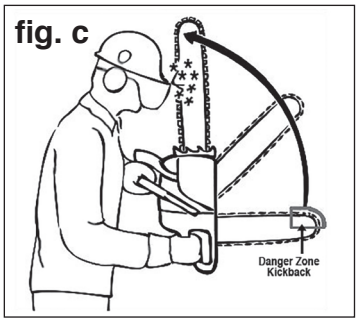


# SAFETY LINKS

There are two basic types of safety links. These safety links may vary a little in shape, but all serve the same purpose. Bumper safety links **(fig. a)** are recognized by the small fin that is visible on the top side of a drive link. While the Guard links **(fig. b)** are recognized on the tie strap and will also have a small fin on the top/side of the strap. Both serve the same purpose in reducing kickback **(fig. c)** and making it more safe for the operator. The kickback zone is outlined at the tip of the bar.



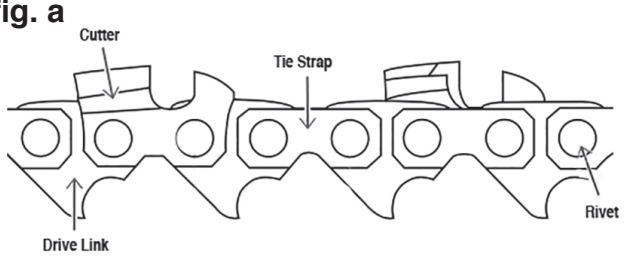




# PARTS AND FUNCTION OF CHAIN SAW CHAIN

Chain saw chain has four basic parts that are common and consistent throughout the chain saw world. In the picture on the left **(fig. a)** you see these four basic parts. The Cutter, Drive Link, Tie Strap and Rivet make up a chain saw chain. These function are listed below.

**fig. a**



- **Drive Link:** This is the portion of the chain that is turned by the chain saw sprocket and allows the chain to move and be guided by the groove in the bar.

- **Tie Strap:** The tie strap is actually made up of two components the plain strap and preset strap. These straps along with the rivets are what connect the cutter and drive links together.

- **Rivet:** This is simply the round pin like item that holds everything together and is built into the preset strap.

- **Cutter:** This is the portion of the chain that is raised above the rest of the chain. There are several different styles of cutters. They all have the same fundamental designs as listed in the picture **(fig. b)**

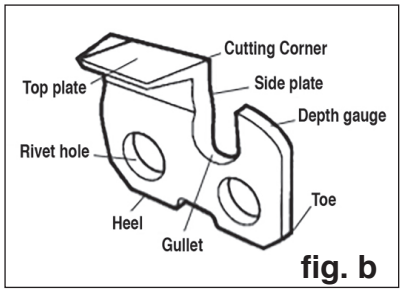


**fig. b**

# GAUGE MEASUREMENT OF CHAIN SAW CHAIN AND BAR

There are two different gauge measurements that you need to know when looking for your bar and chain. Pictured below **(fig. a)** is a drive link and a reference to how the gauge is determined. The thickness of the drive link will determine the gauge of chain you have. Also shown **(fig. b)** is a bar groove where the chain rides on, in the bar. This is where you will find the bar gauge. Here are some quick refences you can use when determining the gauge you need. **(fig.c)**

.050
.058

**fig. b**

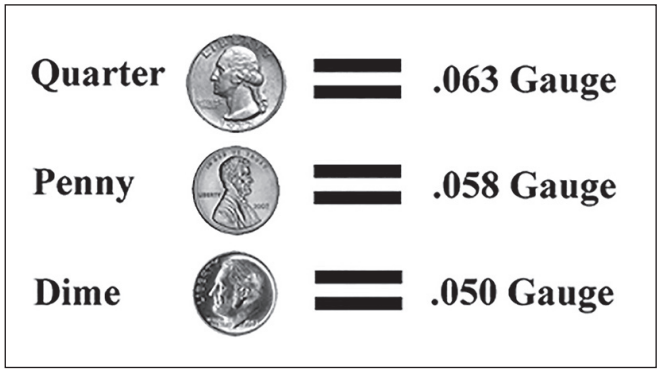

**fig. c**

# HOW TO MEASURE CHAIN PITCH

The pitch of the chain is the distance between the drive links. To determine the pitch you simply measure the distance from one rivet on the drive link to the same rivet on the adjacent drive link. As shown below **(fig.a)** you measure the distance between three rivets and divide by two. That will give the pitch.

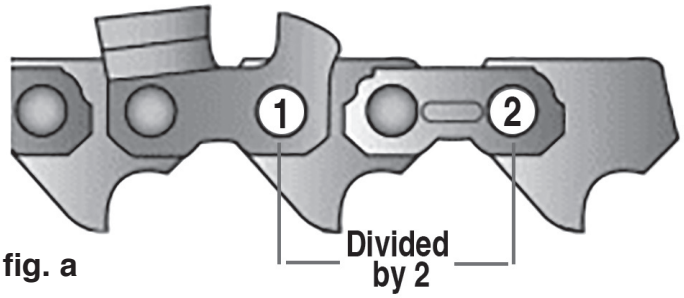

fig. a

**Example: If the distance between rivet 1 and rivet 2 is 3/4". Divided 3/4" by 2 = 3/8"**

Rotary has four different pitches of chain: 1/4, 3/8 Low Profile, 3/8, .325. The difference between 3/8 Low Profile and 3/8 Standard is simply the cutters. The drive links and straps are all larger, but the distance between rivets are the same.

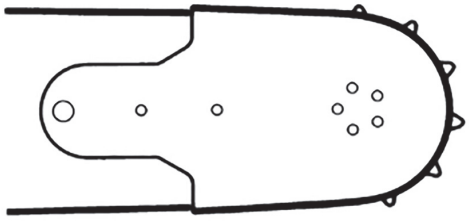
# IDENTIFYING TYPES OF CHAIN SAW BARS

Rotary has three types of Chain saw bars. The bar type can be identified using the Rotary part number from the bar. The third number from the end of the Rotary part number identifies the bar style. (See chart below)

- **Bar Style 1:** This bar is for the consumer and can visually be identified by only having one rivet at the end of the bar where the bar sprocket is located.
- **Bar Style 3:** This bar is a Prosumer bar and is designed more for commercial use. This bar can be identified by having multiple rivets at the end of the bar where the bar sprocket is located.
- **Bar Style 5:** This bar has a replaceable sprocket tip and is for commercial use. The image below is a replaceable sprocket tip for a style 5 bar. If you will notice there are multiple rivets in the tip. This information will now be easy to identify the bar style both visually and by part number.



## ROTARY GUIDE BAR NUMBER SYSTEM

**EXAMPLE: 35-9112118**

**35-9 will appear on all Bars, Bar Chain combos and Replacement Bar Tips**

| 1 | 1 | 2 | 1 | 18 |
|---|---|---|---|---|

| Mounting Pattern | Pitch | Gauge | Bar Style | Bar Length |
|---|---|---|---|---|
| 1 = A041 | 1 = 3/8 Low Profile | 1 = .043 | 1 = Consumer | The last two digits in the number are the length of the bar. In the example above it is 18" in length. |
| 2 = A074 | 2 = .325 | 2 = .050 | 3 = Prosumer | |
| 3 = A218 | 3 = 3/8 Standard | 3 = .058 | 5 = Pro Sprocket | |

# ROTARY CHAIN SAW BAR AND CHAIN CHART

The Rotary chain saw bar and chain chart is formatted across two pages for each model listing as shown below. To quickly identify the bar and chain needed for an application by model follow the steps listed below.

**A.** This is the section where the model of the saw should be identified. Once identified move to section B.

**B.** Identify the length, gauge, pitch, drive link count and bar style needed for the application in this section. In most cases as long as the length, pitch and gauge are identified correctly the drive links will also be correct. Bar style is simply based off of preference or use of the saw. Once the length, pitch and gauge are identified follow the chart on the same line to section C.

**C.** This section will give the part number to the bar needed for the model saw you have, now that the you have determined the line to follow across the chart in section B. Now follow that line across the page to section D.

**D.** This section will fined the part number to the "Consumer" (chain with bumber or guard links) chain that will fit the saw and bar you have selected.

**E.** Following the same line across the page this section will fined the "Prosumer" (chain without bumber or guard links) chain part number that will fit the saw and bar you have selected.

**F.** This section will give you the part number to a bar and chain combo if there is one available. Remember this must be on the same line you followed across the pages starting in section B.

| 41 - **5518** | Nut (Scraper) | MIN 010 |
| 41 - **5519** | Fastener (Paddle) | MIN 010 |

Fasteners (Toro & Jacobsen only)

**Toro**—Paddles have 7 fasteners on each (14 fasteners per machine). Scraper has 3 bolts and 3 nuts each.

**Jacobsen**—Paddles have 6 fasteners each (12 fasteners per machine). Scraper has 3 bolts and 3 nuts each.

**Note**: Paddle fasteners—Should be replaced when paddles are replaced. Our fasteners are the next size larger and help prevent backing out because of repeated removal and assembly.

Scraper bolts—Are a button head allowing the user to insert an allen wrench and thus remove more easily. Generally, the nut and bolt rust together and have to be cut apart.

Both the paddle fastener and the scraper bolt will have a pre-applied adhesive to help prevent loosening due to vibration.

## 16 Strand Arborist Rope from Pelican Rope

This high-strength composite climbing rope features a tough 16 strand braided chemical resistant polyester cover over a non-rotational nylon parallel core. This construction results in a smooth running rope ensuring fewer snags and minimal abrasion. Its 16 strand weave is steam set which helps to eliminate cover over core slippage.

# Tree Viper 24 Strand Climbing Rope from PELICAN ROPE

43 - 16756 43 - 16757 43 - 16758

The Tree Viper is a unique hand-spliced 24 strand rescue rope. This rope looks great, and provides easy knotability and zero milking. The bright colors of the rope ensure excellent visibility.

The incredibly strong cover of this climbing rope runs smoothly over sheaves, providing reduced drag through gears for faster ascending and finer control while descending. The nylon core holds better and stronger knots, due to its stretch and texture.

The double-ply braid features abrasion and chemical resistant polyester cover over a strong nylon. The polyester cover provides excellent UV Protection, high abrasion resistance, and unmatched durability.
